

ADONIS

Adonis combines a sophisticated design with an excellent extraction capacity. Adonis is the coffee machine chosen for coffee shops and chains that look at the design aspect of the device, without overlooking the technology. All the commands are designed to fuse aesthetics and functionality, giving particular attention to the ergonomic point of the machine so the barista can work in complete safety

TECHNOLOGIES

HEES HIGH EFFICIENCY EXTRACTION SYSTEM

Can exalt the aroma of any coffee because it extracted only the best and creamy substances. The consistency of the result and the persistence of the cream are the main benefits of this technology. It can correct any tamping errors and guarantees a perfect espresso coffee.

P.I.D. SYSTEM

Maximum control for the best result in the cup. Adonis has an electronic temperature control system (PID) that, with extreme precision, allows total thermal stability.

EASYCREAM OPTIONAL

The technological solution to obtain, every time, the same milk cream, simply and quickly. Easycream technology has a double wand that creams the milk and stops automatically as soon as the pre-set levels of temperature and milk cream have been reached. This is an extremely useful solution for speeding up the preparation of milk-based drinks, without loss of quality.
